

- 1) No, I have not done programming before
- 2) I am doing computer science because I have done a bit of computing technology before and I enjoyed that, alongside the possibility of getting a job directly appeals me. I have seen some of the results of programming and the possibility of the outcome of my capabilities with programming appeals me.
- 3) My favourite app/website or software is google and youtube because they are fulfilling my requirements and leisure time. My singing Monsters is my favourite app because it is related to music, which is among my favourite hobbies.
- 4) My Singing Monsters
- 5) Music, Guitar playing, soccer, spending time with friends and family.
- 6) I'm very open minded to most activities.

William Carey

## **How to make a cup of tea with milk and two sugars:**

- 1) Get a kettle and fill one litre of water into the kettle by pouring the water into the cap of the kettle
- 2) Plug into appropriate plug electrical source and turn on the kettle by pressing/flicking the power on button
- 3) While waiting for the kettle to boil, take a cup out of the press and place a teabag into it.
- 4) When the kettle finishes boiling, there will be a bubbling sound from the water. Wait for the sound of the water to settle before pouring the water into the cup approx. three quarters to the top of the cup itself.
- 5) Grab a teaspoon and stir the cup four times. Then take out the teabag and place it in a nearby bin.
- 6) Then add two teaspoons of sugars and repeat the stirring movement (double the movement this time)
- 7) Then add milk and stir for a bit.
- 8) Put the teaspoon away and enjoy your cup of tea

- A) Go to the first switch and flick it for at least five minutes
- B) flick it off and flick the second one on.
- C) Then go to the room where all three blubs are.
- D) Observe which switch is on and that is the second switch
- E) Feel the two blubs afterwards where the warmer of the two blubs off is the first switch and the cooler of the two is the third switch.
