Lab Work Week 6

Problem 1

Create a html page and a table that looks as follows:

Page Header		
Advertisement Space	Menu	
	Main Content Area (Text and Images)	Blog Links
Footer		

Problem 2

Create a html page and a table that looks as follows:

Courses: DT228 and DT282	
Modules	Year 1
	Web Development Program Design
2016 - 2017	

Problem 3

Create a table to represent your timetable. Rowspan and Colspan should be used to group cells of the class is longer than 1 hour.

Problem 4

Validate the 2 html pages on webcourses (FourPages.zip) using the W3C HTML validator. Correct any errors in the HTML markup to get the page to validate

Page 1: index.html

The validator will give a warning that the section tag should contain a header.
Have a look at what the W3C say on how a section tag should be used correctly.
http://www.w3.org/TR/html5/sections.html#the-section-element

Hint: A Section tag should not be used as a generic container. A div might be a more suitable alternative!! Add a heading to some of the sections to describe the section content

Page 2: about.html

The validator will give a warning that some tags and attributes are not correct. Correct any errors in the HTML markup to get the page to validate

Problem 5:

Validate some of your previous lab work sites to see how they fair against the validator!!
